

# UNITEDLAYER

## Managed Services - Cloud Connectivity

### Connect to the cloud of your choice, integrate colocation and cloud into a connected multicloud

UnitedConnect is an integrated interconnection system for connecting your on-premises environment to a private cloud or public cloud of your choice (AWS, Microsoft Azure, or GCP). Our cloud networking software allows you to reduce network costs, improve bandwidth capacity, and provide a more reliable network experience than Internet connections.

Cloud Connectivity helps organizations move the workload to any environment as needed. It helps businesses build the ideal environment, merge on-premises, private cloud, and public cloud.

With UnitedLayer Cloud Connectivity, connect your environments securely by using an encrypted VPN tunnel or even bypassing the Internet altogether.

Discover the advantages of an atmosphere that is a true multicloud. Integrate your on-prem environment with UnitedConnect. It allows organizations to connect with private clouds and public clouds of their preference.

Manage workloads across various cloud platforms to meet on-demand needs with Cloud Connectivity managed services. Auto-scale workloads to compensate for unforeseen high or low usage.

## Multicloud Connectivity

UnitedConnect seamlessly integrates your on-premises environment with private and public clouds of your choice. It offers API drive connectivity from 100Mbps to 10Gbps on a pay as you use basis. Using industry-standard 802.1q VLANs, this dedicated connection can be partitioned into multiple virtual interfaces. This allows you to use the same connection to access public resources using public IP address space while maintaining network separation between the public and private environments. With UnitedConnect, you can also monitor the performance of your network links across your multicloud environment.

## Disaster Recovery

Looking for a secure backup, failover, or redundancy option to support your disaster recovery plan? UnitedConnect provides a dedicated connection between UnitedLayer and your on-premises data center or other cloud vendors. This enables you to bypass the Internet while you are backing up and recovering application data.

## Guaranteed Performance

UnitedConnect offers a variety of reliable connection speeds—from 100Mbps to 10Gbps on a consumption-based 'pay as you go model'. It is also backed by our 24x7 monitoring and high-touch support with a 15-minute response time SLA included.

### UnitedLayer Advantage

UnitedLayer provides the Colocation services from one of the largest data centers in San Francisco, USA, at 200 Paul Ave . We put you on the fast track to growth and help you realize the Full Value of your investment in any Cloud Infrastructure Solutions. We Design, Build, and Manage Enterprise-Grade Colocation Solutions that meet the Performance, Security, and Scalability to serve your Unique Business Needs.
