UNITEDLAYER

Managed Services - Data Privacy Management

Managed Services provide a host of support functions to help organizations improve their performance in the cloud. UnitedLayer Data Privacy Management Services help organizations comply with data sovereignty and data protection laws applicable to businesses in any market across the world. This includes the California Consumer Privacy Act (CCPA), Health Insurance Portability and Accountability Act (HIPAA), and the European Union's General Data Protection Regulation (GDPR).

When paired with our data privacy solutions, organizations also receive additional 24x7x365 threat monitoring, response, and analytics. This helps businesses assess their threat risk, create custom policies to encrypt and restrict access to sensitive PII data, and generate reports on data access. We use CCTV to monitor the facilities and conduct a strict ID control to access the data hall.

Typical targeted compliance standards include:

✓   Federal Risk and Authorization Management Program (FedRAMP; including Federal Information
✓   Security Modernization Act [FISMA] and International Traffic in Arms Regulations [ITAR]).
✓   Health Insurance Portability and Accountability Act (HIPAA; including Health Information
✓   Technology for Economic and Clinical Health [HITECH] Act).
✓   International Organization for Standardization (ISO; including 9001 and 27001).
✓   Payment Card Industry Data Security Standard (PCI DSS).
✓   Sarbanes-Oxley Act (SOX).
✓   System and Organization Controls (SOC) (1 [SSAE 16] through 3).
✓   General Data Protection Regulation (GDPR).

GDPR

UnitedLayer provides you with complete data access and lets you decide why and how your data is processed. We maintain limited knowledge of the data processed by each customer via the hosting infrastructure, and we only process your data according to your instructions.

If you wish to move your data beyond the EU and the EEA, we provide an adequate level of guaranteed protection for your data. In other countries, like Amsterdam, we have data centers that provide our customers with additional options for an EU footprint.

Data Sovereignty

Our solutions concentrate on bringing the power of the cloud to your data center, allowing you to satisfy data sovereignty requirements more easily and enhance your efficiency by locating cloud resources closer to you. We make sure the data in transit at data at rest is encrypted.

Our solutions ensure your data is subject to the country's laws and governance systems and we ensure a simpler and more efficient migration path in which you can leverage your current application ecosystem. Our solutions are compatible with HIPPA, PCI, DISA, and SOC.
