UNITEDLAYER

Managed Services - Infrastructure Management

The network management services offered by UnitedLayer help organizations optimize the benefits of a multi-cloud environment without sacrificing availability, efficiency, and security. Our managed network offerings include data center on-site, private cloud at UnitedLayer, and leading public clouds such as AWS, Microsoft Azure, and Google Cloud Platform (GCP).

Maximize the Benefits of your Multicloud Environment

OS Management

Setup, installation, configuring, patching, tracking, maintaining, and supporting bare-metal servers 24x7x365 on any operating system like Linux (CentOS, Ubuntu, SUSE, RedHat) and Windows or every other big platform.

Hypervisor Management

Setup, patching, monitoring, management and 24x7x365 support of numerous hypervisors like Hyper-V, VMware ESXi, KVM, Linux KVM, Citrix XenServer or any other industries leading solutions.

A Reliable Infrastructure Management Service for Businesses of any size

Our services depend on the pool of our highly trained engineers who deliver the most suitable strategy to streamline your IT operations and reduce costs.

Our services cater to on-prem data centers, leading public clouds or UnitedPrivateCloud.

Benefit from our 18+ years of experience in delivering success to businesses of all sizes.

Server Monitoring

Partner with UnitedLayer to leverage an enterprise-class server and network monitoring solution, with 24×7 reporting and escalation capabilities. Our server monitoring solutions will help you mitigate risk and help your organization operate smoothly.

We provide real-time monitoring and support for server system resources. We provide regular alerts via SMS, E-mail, ticketing systems, voice calls, or a customized HTTPS delivery using POST/GET.

Server Management

Our fully managed, dedicated, bare-metal server and/or Virtual Private Server solution delivers the performance, reliability, scalability, and security necessary for enterprise-class applications and workloads.

We help organizations optimize server performance through file management, task optimization, and real-time performance monitoring.

We also manage server upgrades and patch management.Server security is ensured through installation and updating of antivirus softwares, server security administration, and user management services.

Network Monitoring

We monitor and alert network devices like Cisco, Juniper, Palo Alto Networks, Fortinet, CheckPoint, F5, and essential components of the infrastructure such as remote access gateways, VPNs, and load balancers.

With industry-leading monitoring tools, we help businesses prevent unplanned downtime, detect any risks to security, and navigate a changing IT environment.

Network Management

The managed network services help you build a cost-effective and future-proof network that integrates seamlessly with your on-site infrastructure, private cloud, and public cloud. Our offerings for network management included the following:

- Design, build & operate a managed high-performance network
- Managed firewall and security policies
- Managed VPN & layer-2 connectivity
- Managed multi-homed
- Managed network load balancing with SSL support
- Configuration Management & Optimization
