UNITEDLAYER

Managed Services - Network Management

Managed Services provide a host of support functions to help organizations improve their performance in the cloud. UnitedLayer provides setup and management of network devices like switches, firewalls, and load balancers. We enhance the configuration of these devices to seamlessly adapt to workloads, security patching, monitoring, alerting, along with 24x7x365 support across the globe for every customer.

Network Management services optimize load balancing of your traffic by distributing incoming traffic for peak performance, bypassing any failed server, and increasing scalability by adding more servers. We offer three types of Load Balancers: Hardware Load Balancer, Virtual Load Balancer, and Cloud Load Balancer.

UnitedLayer provides setup and management of Switches and Routers, including setting up the network configuration, VLANs, security, port mapping, LAN and SAN network monitoring, traffic engineering, BGP, security, DDoS mitigation alerting and network optimization to handle evolving workloads.

Experience the best colocation facility in San Francisco!

Switches & Routers

Switches & Routers offer efficient, reliable, high-performance customer operations by providing a protective barrier that analyzes traffic and data packets while controlling access to its customers' environment by applying rules and policies.

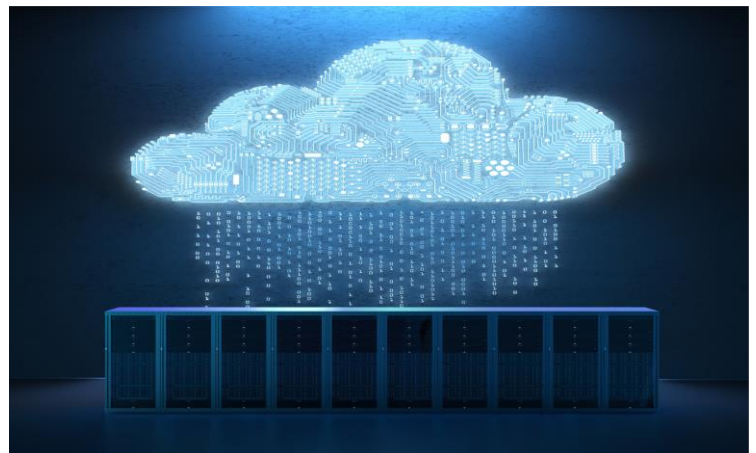

Firewalls

We offer no-compromise security and high-performance versatility for data centers by automatically blocking malicious traffic and rapidly responding to threats. We manage firewall policy and configuration by the following feature sets: Support for traditional firewalls and next-generation firewalls (NGFW) automated network mapping, Hybrid cloud support policy planning, and rule management.

Load Balancers

Offers automated load balancing of customer traffic by distributing incoming traffic for peak performance, bypassing any failed server, and adding more servers to increase scalability.

UnitedLayer Advantage
